

PYTHON QUIZ GAME PROJECT REPORT

Name: Ayush Upadhyay

Course: BCA

Project Title: Python Quiz Game

University: Shobhit University

1. Introduction

This project is a Python-based quiz game that allows users to answer multiple-choice questions. It is designed to test knowledge and provide an interactive learning experience.

2. Objective

The main objective is to understand Python programming concepts such as loops, conditions, lists, and user input handling.

3. Tools & Technologies Used

• Python • VS Code / Notepad • GitHub for version control

4. Features

• Multiple-choice questions • Score tracking system • Simple and user-friendly interface • Instant feedback (correct/wrong)

5. Working of the Project

The program stores questions in a list. It loops through each question, displays options, takes user input, checks correctness, and updates the score. Finally, it shows the total score.

6. Code Explanation

The code uses a list of dictionaries to store questions and answers. A loop iterates through each question. The `input()` function is used to take user responses. Conditional statements check answers and update score.

7. Output Screenshots

Screenshot 1: Program Start Screen (Add here)

Screenshot 2: Question Display (Add here)

Screenshot 3: Final Score Output (Add here)

8. Advantages

• Easy to understand • Beginner-friendly project • Helps in logic building

9. Conclusion

This project helped in understanding Python basics and improved problem-solving skills.
